

# Tested Sealed Safe

The safest aerosol seals in the world

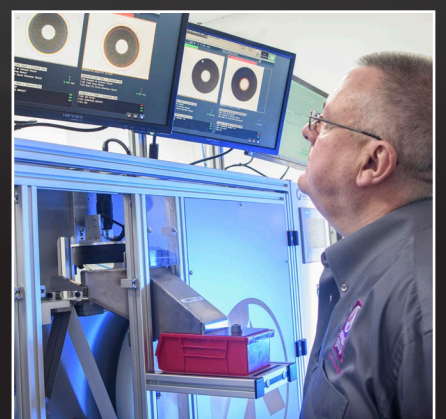

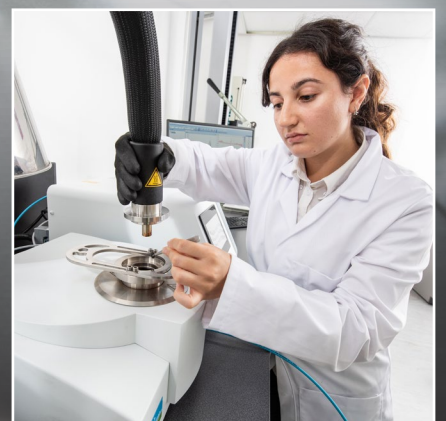

## Tested, Sealed, Safe

Avon Group is the world's only manufacturer of both inner valve stem seals and outer gaskets for aerosols and pressurised dispensers. No other company applies the same level of attention to the consistent quality of materials and manufacturing to ensure the safe performance of their seals in use.

We understand how critical the safe functioning of any aerosol valve is to our customers' reputation and the perception by consumers of their brand.

***Tested, Sealed, Safe means what it says - nothing short of 100% reliability is acceptable.***

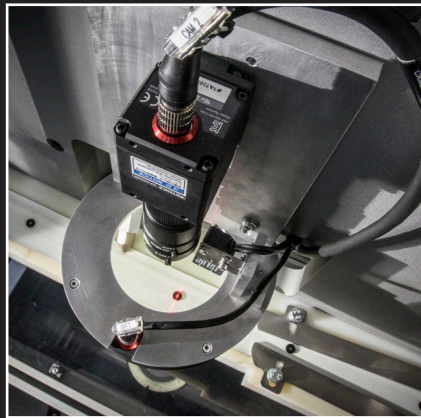

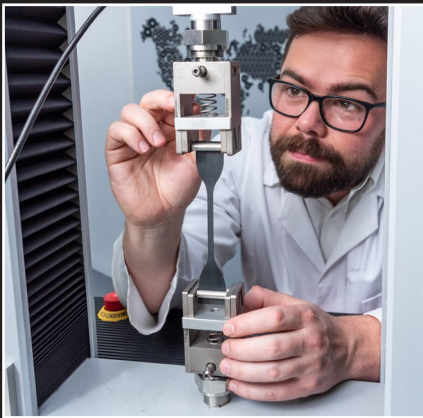

# Global reach

Based in the UK and with true global reach, we have worldwide distribution hubs in Europe, the USA, India and China. This gives us the ability to be highly responsive to fluctuations in supply requirements for both stem and cup seals, ensuring supply continuity and quality consistency at all times. This is backed by personal sales representation in all major markets around the world.

As an internationally recognised, UK-based manufacturing company, we enjoy high levels of reliability of supply of raw materials and energy at our world-class manufacturing facilities in South Wales. Here we have technical laboratory facilities alongside sophisticated manufacturing technology and unique quality control systems, all of which combine to offer an unrivalled service in this sector.

## Quality assured

Our skilled team of industrial chemists, laboratory technicians and material technologists have the expertise and facilities to work closely with our customers on material selections and develop bespoke material formulations to enable flawless functioning of the valve, whatever the contents.

We are able to exhaustively test a wide range of materials and produce samples in a true manufacturing environment. We're also able to fully test valve performance using pressurised aerosol cans to simulate results on customers' filling lines.

FTIR and TGA fingerprint quality testing is undertaken on production material batches on a daily basis. In addition, our investment in sophisticated and unique vision testing systems also ensures we can guarantee, not only material quality standards, but unrivalled dimensional tolerances and traceability throughout the manufacturing process.

## Supply continuity guaranteed

From our UK base and through our distribution hubs around the world, we're geared-up to meet the needs of businesses who are seeking total supply reliability. This means working in regular, close partnership with customers to forecast demand and help smooth peaks and troughs in their production cycles.

At the same time, our manufacturing processes and supply chain logistics are sufficiently flexible to manage a swift response to unexpected demands if they occur.

## Focused on your business

Our business is customer centric and focussed on making our contribution intrinsic to your success. This not only means helping to meet your commercial goals but wider environmental and sustainability targets such as carbon reduction, recyclability and ethical sourcing.

*At Avon Group, our strongly-held values of 'Care and Pride' underpin everything we do. We CARE about your business, our relationship with you and the quality of our products. We take PRIDE in the value we contribute to your businesses and offering you 'industry best'.*

# Manufacturing consistency built-in

Our world-class manufacturing plant, operating to internationally recognised and audited operational standards, has unique and impressive capabilities.

Our investment in new, 'state of the art' automated manufacturing technology puts us at the cutting edge of aerosol gasket manufacturing in the global marketplace. With the ability to offer unrivalled CPK values for inner and outer dimensions as well as wall thickness, our product quality is unparalleled in the industry.

Extensive volume manufacturing capability coupled with sophisticated in-line quality control means we can maintain a consistent supply of product to match customer expectations wherever and whenever in the world it is required.

Avon Group has unrivalled expertise developing and manufacturing products using specialist materials that solve a massive range of challenges for industries around the globe.

The Group is one of the largest suppliers of sealing gaskets for aerosols in the world, a major manufacturer of specialist parts for the automotive industry and an industry leader in the design and manufacture of specialist products for industry, using a wide variety of specialist materials for insulation, protection, sealing, filtration and reduction of noise and vibration.

With extensive design and manufacturing capability across nine sites, the Group serves the needs of industries in the UK and around the world.
